Integrating Oral Health within Multiple Long-Term Conditions (MLTC) Care Coordination

If you're a dental professional (dentist, therapist, hygienist or nurse), we would like to hear your views on a study about how best we can support adults with multiple long-term conditions to look after their oral health and receive dental care.

Can you help us?

You would have an informal group or one-to-one discussion based on your preference.

“Multiple long-term conditions” means living with more than one long term health condition. These may include, but are not limited to:

- Physical health conditions (e.g. diabetes, heart disease)
- Mental health conditions (e.g. depression, schizophrenia)
- Ongoing conditions such as learning disability
- Sensory impairments such as hearing or sight loss
- Alcohol or drug-related conditions

To say Thank You you will be remunerated at an appropriate rate according to your professional role

If you are interested, please contact Dr Easter Joury at: easter.joury@manchester.ac.uk or 07482218996.

We will tell you more about the engagement dates and answer your questions.
